

**IN THE COMMISSIONERS COURT OF
DE WITT COUNTY, TEXAS**

COURT ORDER NO. 2021-068

**ORDER ADOPTING REDISTRICTING PLAN
FOR COMMISSIONERS COURT PRECINCTS**

BE IT REMEMBERED, that on the 8th day of November 2021, came on to be considered the issue of periodic redistricting of county political boundaries. This Court has, in due time, given deliberate consideration to the legal issues and of governmental duties imposed by state and federal law. In addition, the Court has previously entered in the minutes of this Court, criteria by which any redistricting plan would be considered, the prior Order establishing criteria being incorporated herein by reference.

This Court has commissioned and has received an Initial Assessment by qualified professionals experienced in the field of redistricting law for the purpose of making a preliminary determination of population distribution between the four commissioners court precincts, and the obligation to comply with “one-person-one-vote” balance as required by applicable state and federal law. This assessment has been filed in the minutes of this Court, and is incorporated by this reference as Exhibit 1, Initial Assessment. A finding, based upon this assessment, recognized the legal duty to redraw political boundaries to comply with applicable law, and a copy of this finding is entered into the minutes of this court, by which reference this prior finding is incorporated into this Order of the Commissioners Court, Exhibit 2, Order Requiring Redistricting.

After convening in Public Hearing for comment upon any and all proposed plans, and after meeting in open session for the purpose of considering alternatives available to the County for modification of existing political boundaries in a manner designed to achieve both acceptable levels of numerical balance between the four commissioners court precincts, and to protect the voting rights of all residents of De Witt County, the Commissioners Court has determined to adopt the redistricting plan attached to this Order in map and data form, Exhibit 3. At a later date, this Court will receive a more complete description of this

plan, including a map depiction of all new political boundaries, polling places, election precinct boundaries, and any affect such changes in Commissioners Court precincts may have upon Justice of the Peace/Constable precincts. This supplemental order will be taken up and considered by the Court after public notice as required by law.

IT IS THEREFORE ORDERED ADJUDGED AND DECREED that the Redistricting Plan depicted in the maps and data attached to this Order are hereby APPROVED and ADOPTED by the Commissioners Court of De Witt County, Texas. Upon final approval of the supplemental data to be provided at a later date, the Redistricting Plan, Proposal 1 adopted by this Order shall be effective immediately for use in the 2022 General Primary Election and for all subsequent elections until changed or modified by later Order of this Court.

Signed this 8th day of November 2021.

County Judge, De Witt County

Commissioner, Precinct 1

Commissioner, Precinct 2

Commissioner, Precinct 3

Commissioner, Precinct 4

ATTEST:

County Clerk, Ex Officio Clerk of the
De Witt County Commissioners Court

TABLE OF CONTENTS

TAB A: Initial Assessment

The Initial Assessment is a narrative analysis of the data contained in the PL94-171 files provided by the Census Bureau, together with an explanation of the impact such data may have upon the County in light of state and federal law.

TAB B: Statistical Definitions and Determination of Total Maximum Deviation

Definitions of the various ratios, formula and procedures utilized in the analysis of county population. These ratios, formula and procedures have been largely developed in case law in the field of redistricting, together with generally recognized methods of sociological study.

NOTE: Prison inmate populations are included in the census data. However, inmates detained under felony convictions are not eligible to vote under Texas law. As such, populations of inmates held within the state prison system, either in state owned and operated facilities, or under contract in county facilities, are typically not counted in the determination of Total Maximum Deviation, or for other "one-person-one-vote" determinations. For purposes of the Initial Assessment, raw data has been acquired from the County and/or the Department of Criminal Justice regarding prison populations, and from the U.S. Immigration and Customs Enforcement (ICE) for persons held pending immigration cases. In subsequent census data releases, group housing data may reveal more specific information, but at this time, we are deducting prison populations from county population totals in order to arrive at a true "one-person-one-vote" analysis, and to avoid potential imbalances in population that might result of inclusion of prison population in precinct totals. County jails holding persons convicted of both felony and misdemeanor offenses, juvenile facilities, or facilities holding individuals pending resolution of pending criminal or immigration charges are included within the population counts for the county, as reflected in the census data.

DEMOGRAPHIC ANALYSIS

The working file is a demographic analysis of each major County elective office elected from geographic precincts. These files analyze the population demographics of each precinct based elective office, i.e. the offices of County Commissioner, and Justice of the Peace/Constable precincts. Prior to the 1990 census, previously existing election precinct boundaries were often described by non-physical boundaries. Since the use of computerized census maps was first implemented in 1990, based upon topological maps which contain not only physical boundaries, such as roads, streets, streams and water bodies, but also such "non-physical boundaries" as easements, municipal boundaries or other surveyed lines, but not visible on the ground, it was necessary to merely "approximate" those boundaries that were not defined by a physical boundary such as a road, watercourse, or other physical boundary. These approximations were described as Voter Tabulation Districts, or VTDs. It should be

noted that the VTD was only approximation of the actual voting boundaries, since Public Law 94-171 requires that the VTD utilize census blocks as its component parts.

In 1990, most counties adopted election boundaries based on census blocks, but VTDs are still encountered. The boundaries utilized in this Initial Assessment are derived from the Texas Legislative Council, and have been, to the extent possible, confirmed as accurate by local officials. However, some counties continue to have election precinct boundaries defined in a manner that is incompatible with census block-based mapping. Therefore, in some cases, you may find a discrepancy between the actual boundary in use, and the census block-based mapping boundaries used in this report. All future election precincts should be based upon census blocks to avoid any discrepancy between the actual boundary in use and the official boundary description maintained by the Texas Legislative Council.

County demographic data is depicted in chart and graphic form for both total county population as well as voting age population. While "One-Person-One-Vote" balance between the four Commissioners Court Precincts is based upon the entire county population, the availability of voting age populations is also important in two respects.

First, each county should assess the size of existing election precincts. State law limits the size of election precincts of not less than 100 registered voters, and not more than 5,000 registered voters per election precinct. (See §42.006, Texas Election Code, V.T.S.C.A), with some exceptions based on the size of each county population.

Second, in counties inhabited by a significant minority population, the need to create one or more Commissioners Court Precincts that assure minority representation requires utilization of voting age information. While the actual political boundaries will be based upon total population, the viability of the resulting precinct in terms of the ability to elect requires analysis of voting age population.

TAB C: Maps

The following maps depict county populations by census block. It should be noted that in some census blocks, the total population may be very small, and the resulting color shading may therefore result in some misperception of actual population totals.

Correlation of the map depiction with the data contained in the PL94-171 is necessary to assure accuracy of any assumptions or projections for reapportionment purposes. All computer-generated matters contained in this report, including statistical ratios or formulas, are derived from information taken directly from the Public Law 94-171 files of the United States Census Bureau. Allison, Bass & Magee, LLP shall not be responsible for errors that may occur in the PL94-171 data.

Map 1: Depiction of Existing Commissioners
 Court Precincts-County wide

Map 2: Voting or Election Districts-County Wide

Map 2: Hispanic population

Map 3: Black population

Map 4: Other Non-Anglo Population
(Asian, American Indian, Pacific Islander, Other or Multi-racial categories in excess of 3% aggregate. Few Texas counties will have this level of "other" Non-Anglo population. If your county does not have more than 3% of "other non-Anglo population, there will be no Map 4)

Map 5: Justice/Constable Precincts

Map 5 depicts the Justice of the Peace/Constable Precincts, and the respective election precincts of each such Justice/Constable precinct. Reference should be made to Appendix B for demographic analysis of Justice/Constable precincts. It should be noted that the offices of Justice of the Peace and Constable are not considered as representative offices, and are therefore not legally required to comply with either "One-Person-One-Vote" balance or "representative" analysis under Section 2 of the Voting Rights Act. (42 U.S.C. 1973c) Counties are not required, therefore, to make any changes to existing justice or constable precincts by federal law. However, Article 5, Section 18 of the Texas Constitution sets population requirements for the number of justice precincts required. Each County should carefully examine the number of justice precincts required by law to determine if a reduction or expansion of existing justice/constable precincts is feasible. If changes are made to Justice/Constable precincts, either directly or as a result of modification of the election precincts that make up the Justice/Constable precinct, a voting rights analysis under the Voting Rights Act is required.

GENERAL OVERVIEW

Following the Supreme Court decision in *Avery v. Midland County*, 390 U.S. 474; 88 S. Ct. 1114, 20 L. Ed. 2d 45 (1968), Texas Commissioners Courts have been required to make a periodic assessment of their political boundaries to determine whether the boundaries retain "one-person-one-vote" balance. This requirement is now carried forward by statutory requirement in Article 42.001 of the Texas Election Code.

Therefore, following each federal census, each Texas County should conduct an assessment of existing political boundaries. As a very general rule of thumb, any statistical change of population between the 2010 and 2020 census more than 3%, plus or minus, will indicate a potential need for reapportionment. Only in rare circumstances will a county experiencing a population change in excess of 3% avoid the need for rather extensive reapportionment of the county Commissioners Court precinct lines. However, any assumption that a population change of less than 3% will not require reapportionment is ill advised. Populations will shift within a county over time. Every County, even those with a rather insignificant overall population change, should carefully examine actual population demographics relative to their existing political lines to determine the need for reapportionment.

It should be carefully noted that simple comparisons between the county population of 2010 and 2020, or even a more sophisticated analysis of urban and rural areas of the county might not reflect the true extent of population "change" each County has experienced over the last ten years. "Change" may not directly correlate to "different" or "new" population. For example, existing populations within a county move considerably within a ten-year span. The movement of a single family a rural area to an urban area within the same county will impact both categories, and where that move crosses political boundaries, may have a significant impact on the obligation of that County to redistrict.

Efforts to balance road mileage, or to achieve other entirely practical adjustments of county boundaries must be undertaken with great care to avoid unintended shifts of population which will either exceed the required numerical balance, or will offend the Voting Rights Act.

With this general overview, the following sections of this Initial Assessment will evaluate each layer of De Witt County's political boundaries and attempt to determine whether or not the Commissioners Court should undertake reapportionment. Our assessment will point out areas of potential conflict with state and federal law, and will also suggest areas that may be considered for purposes of cost effectiveness and voter/resident convenience.

INITIAL SUMMARY FINDINGS REGARDING NUMERICAL BALANCE:

Please review the information contained under Tab B carefully. Please pay particular attention to the following:

1. Please consider the Total Maximum Deviation in terms of population between the Actual Population of each Commissioners Court Precinct and the Ideal Population. Remember that the ideal population of each precinct is exactly one-quarter of the total county population.
2. Next, consider the Relative Deviation, expressed as a percentage, of the Actual Population of each precinct as compared to the Ideal Population of each precinct.
3. Redistricting will be necessary to comply with 'One-Person-One-Vote' standards if the Total Maximum Deviation between the largest precinct and the smallest precinct (in terms of population) exceeds 10%.
4. Therefore, carefully examine the Total Maximum Deviation calculation. If that number is more than 10%, De Witt County is legally obligated to make changes in its political boundaries to re-balance the population to more equal terms.
5. If the Total Maximum Deviation exceeds approximately 7%, you may want to consider redistricting in order to re-balance your boundaries, although you are not legally required to do so at this time.
6. However, with such a considerable deviation between Precincts 2 and the rest, it is clear that a considerable reduction in the population of Precinct 2 will be required, and that population will need to be carried over to the other precincts in some manner.
7. If the eventual resulting Total Maximum Deviation is below 5%, you are generally safe from legal challenge on a "one-person-one-vote" basis for the next few years.

MINORITY VOTING RIGHTS

As a general rule, where the total minority percentage exceeds 25% of the total population, there is ample justification to create a commissioner's precinct that contains a potential voting majority of minority residents. In concentrations greater than 40%, consideration should be given to creating at least one commissioner's precinct with a potential voting majority of minority residents, with the possibility of any "excess population" being used to impact one or more other precincts. Where the total minority concentration exceeds 40%, the issue of "Packing" becomes a consideration, meaning that minority populations cannot be "packed" into a single precinct, but must be allowed to influence as many precincts as the total minority population warrants without efforts to fragment otherwise contiguous concentrations of minority population.

Please examine the demographic data contained under Tab B very carefully.

With the racial profile outlined under Tab B, minority representation must not be diluted, and where possible, a voting majority of minority residents should be created. In order to achieve the maximum minority representation within the demographic and geographic limitations in existence, it will be necessary to determine which election precincts, and which census blocks, contain the highest percentage of minority population and to take such reasonable measures as will insure the highest possible minority voice in county government. To achieve this goal, some attention must be paid to voting age minority residents. Again, please review the data contained under Tab B. In order to create a viable voting majority of ethnic, race or language minority voters, it is necessary to attain a voting age population within at least one Commissioners Court precinct of approximately 55% or better. In order to accomplish this high number of voting age population, a total population figure in excess of 60% is typically required.

Please examine Tab B to determine the minority population of each of the four Commissioners Court precincts. A determination of whether or not the minority populations in these precincts could be joined in a single precinct, or perhaps concentrated in an effort to maximize minority impact upon elections is difficult to assess without a more detailed evaluation of historical voting patterns, racial demographics, and the realities of political boundaries.

When taken with the numerical imbalances that must be addressed, it would appear that if at all possible, minority populations might be concentrated in at least one Commissioners Court precinct to the degree possible to achieve an acceptable potential minority concentration. Typically, the Commissioners Precinct with the largest minority concentration prior to redrawing lines is the best candidate for any alternative plan, but other possible constructions of precinct lines might well result in a favorable racial profile.

Fragmenting minority population concentrations must be avoided. Any modification of political boundaries to accomplish compliance with the requirements of the Voting Rights Act must be carefully considered.

ASSESSMENT OF JUSTICE OF PEACE AND CONSTABLE PRECINCTS

Please see Map 5 for a description of existing Justice of the Peace and Constable Precincts in De Witt County.

Article 5, Section 18 of the Texas Constitutional provides that each county of the State having a population of 50,000 or more shall be divided into not less than four and not more than eight precincts. Counties having a population of less than 18,000 shall be composed of a single justice/constable precinct, unless the Commissioners Court determines that not more than four such justice/constable precincts are needed. Counties having a population of less than 150,000, but which contain a city having a population of 18,000 or more inhabitants, shall provide for not less than two justices of the peace to service the city(s) having 18,000 or more inhabitants.

In each precinct so created, there shall be elected a Justice of the Peace and a Constable, each of whom shall hold office for four years.

Within the context of these Constitutional provisions, it is recommended that De Witt County reconsider the actual need for justice/constable precincts, and consider whether that need suggests change in the present configuration of justice/constable precincts. Article 292.001 Local Government Code and Article 27.051, Government Code address the location of Justice of the Peace courts. In counties having a population of less than 50,000, the County Commissioners Court may locate the justice courts either in the precinct served that justice court, or may centralize the courts in the County courthouse. In counties having a population greater than 50,000, the justice courts must be physically located in the precinct they serve.

ASSESSMENT OF ELECTION PRECINCTS

Election Precincts are the building blocks for all other political boundaries. Therefore, our assessment begins with this primary political unit. According to Article 42.006, Texas Election Code, V.A.C.S., each election precinct must contain not fewer than 50 registered voters and not more than 5000 registered voters. (Exceptions apply depending upon county population). For the Initial Assessment, no attempt has been made to acquire actual registered voter information. In this preliminary assessment, a formulistic approach will be used. For purposes of the Initial Assessment, we make some assumptions that allow us to estimate the highest probable number of registered voters that might reside within an election precinct. Using the voting age population demographic information contained in Appendix B, we assume that the percentage of actual registered voters would never exceed 70% of the total "eligible" voters over the age of 18 years. This assumption will generally hold true, but in some isolated cases, the actual number of registered voters may exceed 70% of total eligible voters.

Reducing the number of election precincts, where appropriate, lowers the overall costs of elections, but this reduction must be coupled with other factors, such as automated vote counting, in order to ensure that election returns can be quickly and accurately tabulated in the resulting larger election precincts. With automated vote counting systems, smaller polling place staff can accommodate larger numbers of voters, and achieve overall reductions in the costs of elections.

Current election precincts are generally acceptable. However, as the boundaries of the Commissioners Court precincts are altered to accommodate "one-person-one-vote" and Voting Rights Act changes, there will be incidental modification to your existing election precincts in most areas. In addition, you may wish to make other changes in existing election precincts to accommodate state law requirements regarding the number of voters permitted in election precinct, or to address other issues of local concern. As the process continues, we will discuss these issues with you for your guidance.

CONSOLIDATION FACTORS

A limiting factor in wholesale consolidation of county election precincts will be the restraints imposed by Art. 42.005, Texas Election Code, V.A.C.S., which restricts county election precincts to that territory which does not contain more than one commissioner's precinct, justice precinct, congressional district, state representative district, state senatorial district, or a State Board of Education District. It is also recommended that residents of a municipality be in separate election precincts from rural voters, for purposes of conducting city elections.

In any plan for county election precincts within a city having single member election districts, city ward lines must be followed to prevent a violation of state law. Therefore, all cities within the county should be encouraged to participate and cooperate in the reapportionment process.

Although state law does not require the county election precincts to conform to independent school district election precincts, if De Witt County serves as the election's administrator for other jurisdiction's elections, it only makes prudent sense to consult with each political entity to make sure your county election precincts are compatible with city or school single-member districts.

GENERAL HOUSEKEEPING

Some attention should be given to "straightening" political boundaries into more uniform shape. In some cases, certain election precincts may be altered to use a more commonly understood or recognized physical boundary in lieu of a poorly identified or recognized boundary. Public Law 94-171, which directed the Census Bureau to develop a uniform mapping and demographic profiling approach for use by small personal computers, required that all voter tabulation districts (VTDs) follow census block boundaries. In many cases, county voting districts had been previously drawn in a manner that did not follow a census block boundary. This required the State of Texas, acting in conjunction with the State Data Center and the Texas Legislative Council, to move the actual voting district boundary to coincide with a nearby census block boundary for tabulation purposes only. The resulting VTD was no longer "actual," but an approximation referred to as a "pseudo-voting district."

Every reasonable effort has been made to conform the pseudo voting district to actual VTD boundaries. However, due to the nature of the available data base, and the requirements of Public Law 94-171, there may be occasions in which the pseudo voting districts, or the resulting lines between commissioner's court precincts, are different from those that actually exist. Again, the use of the pseudo voting district was for tabulation purposes only, and any apparent difference between actual and apparent political lines should be considered as minimal. However, since all later census counts were undertaken upon the census blocks, there could be a valid argument that a necessity to alter current election district boundaries to match the census block format exists. Under these circumstances, new political lines will be required to avoid conflict with census block lines that do not match current political area definitions. While matching census blocks to actual political lines would not, in and of itself, generally support a decision to reapportion under the circumstances that exist in De Witt County, there is a justifiable combination of factors that would support a reapportionment decision. These factors would include:

1. Redrawing election precincts to increase voter convenience.
2. Consolidation of election precincts where practicable.
3. Resizing election precincts to achieve greater efficiency.

4. Harmonizing actual political lines with pseudo voting districts based upon census blocks.
5. Redrawing all lines to achieve “one-person-one-vote” deviations of the smallest possible percentage.

CONCLUSION

While the primary task of reapportionment will concentrate on the issue of numerical balance and minority representation in the formation of commissioners’ court precincts, other valuable improvements could also be achieved in the political well-being of De Witt County by redrawing existing lines. The method and manner by which these less direct goals are accomplished is a responsibility imposed upon the Commissioners Court beyond those expressly required by the Voting Rights Act or the Constitution, but which may have just as much value to the general public. Cost efficiency and voter convenience in elections that might be achieved by a serious evaluation of election precincts, and the elimination of unnecessary confusion by cooperation with other governmental entities are only two of the benefits that might be achieved by reapportionment beyond the legal duties required by law.

Another issue that should be considered is the actual need for Justice of the Peace/Constable Precincts. While local demand for Justice/Constable services may well justify the current number of justice courts, the cost of maintenance and administration of these particular governmental offices should be carefully evaluated. However, state law may limit a county’s ability to reduce the number of Justice/Constable precincts.

Finally, the county should consider a wholesale renumbering of its election precincts in order to simplify future elections. Consolidation should be considered where possible, subject to limitations imposed by state law and were possible by agreement with any Independent School Districts in the County.

Redistricting should be viewed as an opportunity for streamlining county organization, and a chance to address as many issues as possible to achieve greater participation and involvement in county government. This is the time to plan for future growth, anticipate costs of government operations, and to involve the public in the process of county government. We look forward to working with you in this exacting but rewarding process.

Exhibit 2

IN THE COMMISSIONERS COURT OF
DE WITT COUNTY, TEXAS

COURT ORDER NO. 2021-067

**FINDINGS OF FACT REGARDING POLITICAL BOUNDARIES OF DE WITT
COUNTY, TEXAS
FOLLOWING PUBLICATION OF 2020 CENSUS DATA AND
ORDER FOR REDISTRICTING OF POLITICAL BOUNDARIES**

On the 8th day of November, 2021, the Commissioners Court of De Witt County met in regular/called session, having posted notice of said hearing in compliance with Chapter 551 of the Texas Government Code.

The Commissioners Court of De Witt County has previously retained the firm of Allison, Bass & Magee, LLP, of Austin, Texas, to conduct an Initial Assessment of existing political boundaries of De Witt County, following the issuance of census data by the United States Census Bureau. Attached to this Order, and incorporated herein for all purposes by reference, is a copy of the initial assessment conducted by Allison, Bass & Magee, LLP. This assessment is based upon PL94-171 data, as required by federal law, and is further based upon information provided to Allison, Bass & Magee, LLP by the Texas Legislative Council, other official sources of information, and by De Witt County, Texas.

Based upon this information, De Witt County has a total maximum deviation of 12.64%. The term total maximum deviation is determined by dividing the total population of De Witt County by four, the number of Commissioners Court precincts to determine an ideal precinct size. The actual population of each precinct is then determined, based upon the official population data contained within the census count, as defined by Public Law 94-171. The actual population of each precinct is compared to the ideal precinct size and a range of deviation by percentage is determined. Any total maximum deviation in excess of ten percent (10%) is presumptively unconstitutional under established federal law.

In this regard, the County Commissioners Court has made the following election regarding non-voting prison populations located within the county:

1. The Commissioners Court of De Witt County has elected to exclude from the county population total the number of individuals detained in State or Federal prisons located in De Witt County in the belief that inclusion of such institutionalized correctional

populations would unduly impact in an adverse manner the mandates imposed by the United States and Texas Constitutions, and the Federal Voting Rights Act to balance populations and afford meaningful voting rights to the residents of the various single member districts at issue, i.e. (political entity).

As a result of this determination, De Witt County has a constitutional duty to redistrict its political boundaries so as to achieve “One-Person-One-Vote” numerical balance between the four commissioners court precincts at a legally acceptable margin of deviation, and to make such changes as are necessary to comply with the Voting Rights Act and applicable state and federal law.

IT IS THEREFORE ORDERED, ADJUDGED and DECREED that the Commissioners Court of De Witt County, Texas expressly finds that it has a legal duty to redistrict. The public interest will be served by redrawing the existing political boundaries of De Witt County in such a manner as to comply with applicable state and federal law. The Commissioners Court hereby enters the following findings of fact and of law:

1. De Witt County has a total maximum deviation, as defined in this order, of 12.64%.
2. Any total maximum deviation in excess of ten percent (10%) is presumptively unconstitutional under federal law.
3. De Witt County, acting by and through its Commissioners Court, is hereby resolved to immediately undertake such necessary and appropriate action to accomplish redistricting of existing commissioners court precincts, and any incidental modification of existing, consolidated, or newly created election precincts necessary to accomplish such redistricting.
4. The Commissioners Court shall henceforth convene in open meetings, duly posted in accordance with the Texas Open Meetings Act, to take up and consider one or more alternative plans for the legal redistricting of De Witt County.
5. After due consideration of one or more alternative plans, De Witt County shall adopt a plan deemed to satisfy legal requirements, and which best suits the legitimate governmental needs of De Witt County.
6. The adopted redistricting plan will address political boundaries of the Commissioners Court, Justice of the Peace and Election precincts of De Witt

County, and shall remain in effect until altered or amended by subsequent Order of the Commissioners Court.

Signed this 8th day of November, 2021.
